2013

## Long Shelf Life

A pioneering member of the Danish avant-garde in the 1960s, **Kirsten Justesen (b. 1943)** uses her body as material, tool, and subject in her art. She investigates its relationship to space and concepts of transformation.

### Take a closer look

Justesen staged this photograph to celebrate her 70th birthday, reflecting on her long—and still productive—career. Contrast her easy repose with the rigid regimentation of her figurines. A box inscribed “Little old bits of drafts and pieces of pedestals” may imply inspirations for future projects.

### Something to talk about

Justesen was classically trained and identifies as a sculptor though much of her art exists as photographs, installations, performances, and videos. In what ways does this work reflect her interest in three-dimensional concepts like form, space, and mass?

### In her own words

“I use my own body, it can be undressed, dressed, cast, photographed, drawn. It gets pregnant, older, thinner, and fatter. It is always at hand.”
